

Air Saving

2013 Industrial Development Bureau,
Ministry of Economic Affairs
Promote Industrial Green Growth Plan

ENERGY SAVING NO AIR LOSS AUTO DRAIN

Super Air Compressor Technology Co., Ltd.

Feature:

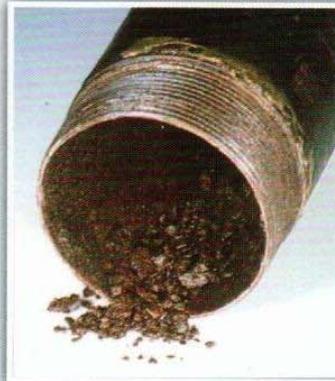

Industrial Development Bureau, Ministry of Economic Affairs "Industrial Green Growth Plan," wish to help enterprises bringing in green and innovative ideas. Promoting efficient use of energy, reduce environmental impact, enhance added value of products, competitiveness and features. The catalogue of this program is to introduce innovative ideas of green technology, products, and services

Industrial Development Bureau,
Ministry of Economic Affairs
Foundation of Taiwan Industry

High humidity - Blade corrosion

High humidity - Rusty pipeline

High humidity - Filter damage

Problems and Situation

- Generally, drainage channels of auto drains are narrow and curve, it's easy to be pounded. Moreover, rubber parts in water storage tank are easy to be aging and damaged, clogging the narrow channel and leading the drain to failure or discharge.
- It caused vibration problems or blade damage if condensate water goes into the second or third compression chamber of air compressor.

Technical Features

This product/technology is "Energy Saving No Air Loss Auto Drain." Our features are:

Reliability:

- Water tank made of stainless steel.
- Operating pressure 0 ~ 16 bars.
- Drainage body and components are 1/2" ball valve, stainless steel ball.
- Drain channel diameter 10mm, no clogging.
- Drain passage in straight line, high drainage patency.

Safety:

- Easy installation, without bypass pipe.
- Automatically decontamination when clogging.
- Automatic emergency drainage when alarm light is on.
- Visually drainage.
- Warning function can connect an external signal.

Applicable Conditions and Objects

Industry of using compressed air system and compressor equipment.

Results and Cases

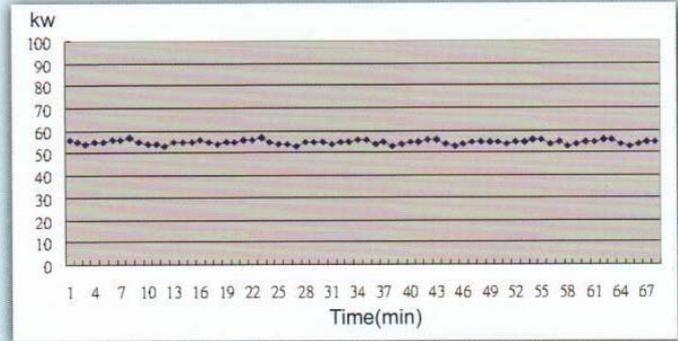

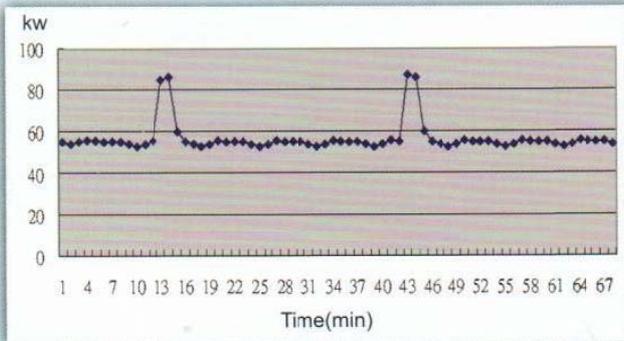

Screw Manufacturing

Improvement plan

Screw Compressor Adopted Timer Drain Change to No Air Loss Auto Drain

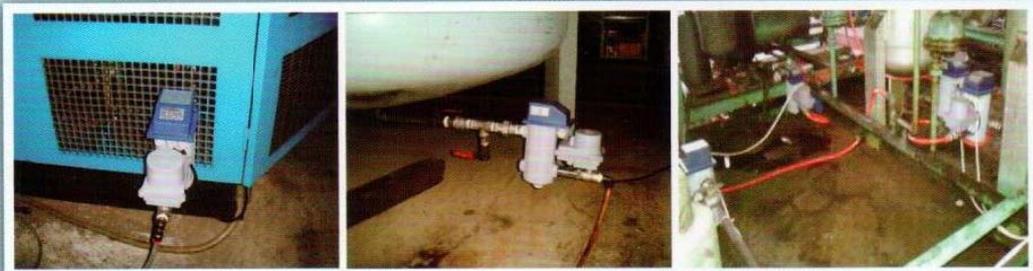

Before: Power diagram of Timer Drain

After: Power diagram when using Super Trap

Power Consumption of Automatic drain mode

	Timer + Solenoid Valve	Super Trap- Ball Valve No Air Loss Auto Drain
Average Energy Consumption	57 kW/unit	55 kW/unit
Number of Units	6	6
Annual Power Costs	57 kW x 8,000 h/y x NTD3/kWh = NTD 1,368 thousands/year = USD 45,600/year	55 kW x 8,000 h/y x NTD3/kWh = NTD 1,320 thousands/year = USD 44,000/year
Investment Costs	NTD 2,500/unit = USD83.34/unit	NTD 15,000/unit = USD 500/unit
Energy efficiency ratio $[(57-55)/57] \times 100\% = 3.5\%$		
Annual savings in electricity costs of replace six unit: $6 \times (57-55) \text{ kW} \times 8,000 \text{ h/y} \times \text{NTD}3/\text{kWh}$ = NTD288,000/year = USD 9600/year		
Payback period: $\text{NTD } 90,000 / 288,000 = 0.3 \text{ year}$		

Improving performance

Mounted on the air tank and refrigerated compressed air dryer

- Investment Costs: about NTD90,000 (USD3,000)
- Economic Value: The savings of electricity 96,000kWh/year
The savings of electricity costs NTD288,000/year (USD9,600/year)
- Payback period: about 0.3 year
- Carbon Reduction Performance: decrease approximately 51 metric tons of CO₂e / Year

Improvement plan

Screw Compressor install No Air Loss Auto Drain

Before:

- Manual control to switch ball valve drain caused a large number of compressed air loss
- The average energy consumption ratio: 0.1476 kWh/m³

After:

- Install Super Trap no air loss auto drain
- The average energy consumption ratio: 0.1428 kWh/m³, effectively reduce energy consumption

日期	用氣量(m ³)	空壓機用電(kWh)	能耗比(kWh/ m ³)
6/1	198,250	29,186	0.1472

7/9	245,180	34,601	0.1411
7/10	212,060	30,157	0.1422
7/11	195,960	28,311	0.1444
7/12	204,560	29,412	0.1437
7/13	262,850	35,579	0.1353
7/14	242,100	34,259	0.1416
7/15	231,350	32,746	0.1415
平均	214,820	30,690	0.1428

Improving performance

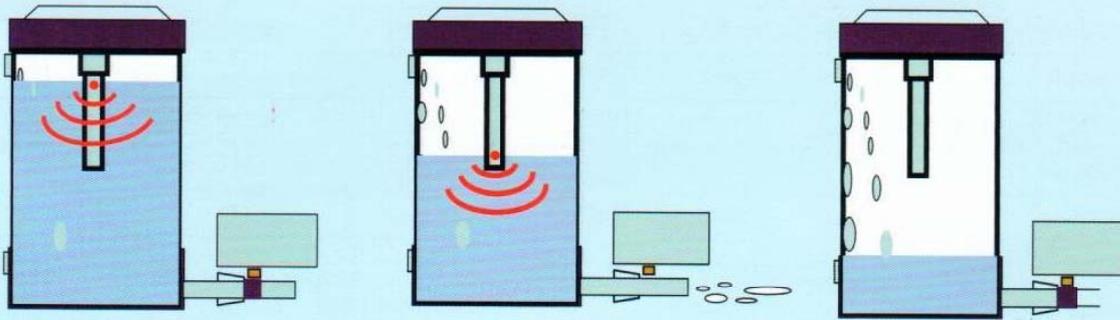

- Investment Costs: about NTD480,000 (USD16,000)
- Economic Value: The savings of electricity 344,400kWh/year
The savings of electricity costs NTD964,000/year (USD32,133.34/year)
- Payback period: about 0.49 year
- Carbon Reduction Performance:
Decrease approximately 138.2 metric tons of CO₂e/year

Note: 1. The average air consumption: 205,000m³/day 2. Working days: 365days/year
3. The average electricity unit price: NTD2.8/kWh (USD0.093/kWh)

Comparison with The Existing Technology

	Drain from oversea	Super Trap
Structure	1) Solenoid valve diaphragm damaged easily, leak and waste of energy. 2) Drainage channels are too narrow and curve, easily clogging leading the drain to failure or discharge. 3) Aluminum	1) No diaphragm no damage, no leaking and saving energy. 2) Drain channel diameter 10mm and straight, no clogging. 3) Stainless steel
Technical level	1) Easy switch positioning 2) Low technical level	1) Complex switch positioning 2) High technical level, high R&D costs
Technology Source	Overseas	Taiwan -- Super Air
Drain efficiency	Low (Single displacement: 75cc/300cc/3,500cc)	High (Single displacement: 200cc/500cc/3,500cc)
Price	NTD 22,000~70,000 (USD 733.34~2333.34)	NTD 15,000~45,000 (USD 5,00~1,500)

Super Trap Operation

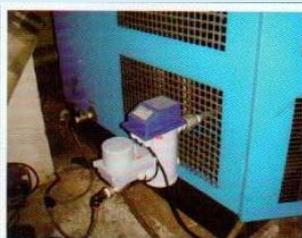

Sensor detects increased water level and automatically signals the ball valve to open,

Sensor signals the valve to close when condensation decreases.

Water Seal prevents air leakage when valve closed.

Installation of Super Trap

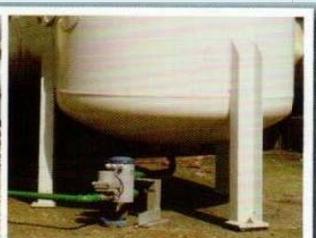

Air Dryer

Oil Free Compressor

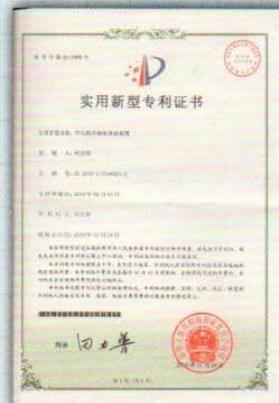

Centrifugal compressor

Air Tank

Technical Certification. Patents and other Technical supporting information

The technology is developed and manufactured by ourselves in Taiwan. With high product stability, we obtain product patent certification from Taiwan, China and Germany.
